The ITeam AI Powered by Hatz.ai

Secure, business-controlled AI for the modern organization

Overview

The ITeam AI is a secure, business-controlled AI platform delivered by The ITeam and powered by Hatz.ai. It gives organizations the benefits of generative AI while maintaining enterprise-grade security, governance, and cost control — something individual AI subscriptions cannot provide. This is AI on your terms: centrally managed, securely integrated, and aligned to how your business actually operates.

Why The ITeam AI

Most organizations adopt AI organically — employees sign up for individual tools, connect corporate data without oversight, and expense subscriptions independently. This creates security risk, data leakage, inconsistent usage, and unpredictable costs. The ITeam AI puts AI under business control, not individual users.

- One **secure AI platform** for the entire organization
- **Centralized governance**, usage visibility, and cost control
- No unmanaged data sharing with **public AI tools**
- **Flexible usage** without per-user licensing waste

Enterprise-Grade Security

Security by Design

The ITeam AI is built for organizations that take security seriously.

Security features:

- **Business-controlled access** — AI usage governed by the organization
- **Centralized data boundaries** — prompts and workflows remain within a managed AI environment
- **Reduced data sprawl** — eliminates employees pasting sensitive data into public AI tools
- **Consistent policy enforcement** — aligned with corporate security and compliance standards

Unlike individual AI subscriptions, The ITeam AI provides one controlled AI layer that the business owns and manages.

Secure Integrations

AI Where Your Teams Already Work

The ITeam AI integrates securely into your existing business systems, bringing AI to the data without exporting data to uncontrolled platforms.

- Microsoft 365 (Outlook, Word, Excel, Teams)
- HubSpot
- Salesforce

Enable AI-powered drafting, summarization, analysis, and automation inside existing workflows with full security and access control.

Credit-Based Usage Model

Fair, Flexible AI Usage for Real Teams

The ITeam AI uses a shared credit-based usage model instead of per-user licensing.

Key points:

- Credits are shared at the company level across all users
- Light users and power users coexist without added licensing cost
- AI adoption can scale safely across departments

If credits run low, AI services do not stop — request speeds are reduced to maintain continuity.

Monthly Plans

Pricing shown in CAD.

Intro	Starter	SMB	Business	Professional
$160 CAD/month	**$400** CAD/month	**$800** CAD/month	**$1,600** CAD/month	**$3,200** CAD/month
30,000 Credits	100,000 Credits	250,000 Credits	750,000 Credits	1,500,000 Credits
Best for individuals or small teams exploring AI	Ideal for small teams beginning regular AI use	Designed for growing organizations	For established teams with consistent AI workloads	For AI-first, enterprise-wide usage

All monthly plans are good for an unlimited number of people—no per-user fees. Unlike other AI tools, this reduces costs and enables organization-wide adoption.

Credit Usage

Credit Usage is dependent on a verity of factors, most prominent being the LLM selected, and the number of AI Tokens used. It is nearly impossible to determine the exact number of AI Tokens a prompt will use, however, estimations can me made based on previous token measurements provided by the LLMs.

Assuming an A4 size of paper has 500 words, producing a 100 word summary should range between 1 and 12 Credits depending on the LLM selected, complexity of the document specifically in regard to word structure, length and count.

Why This Is More Secure Than Individual AI Tools

Individual AI Tools

- User-owned accounts
- Inconsistent data handling
- No centralized visibility
- High risk of data leakage
- Per-user license waste

The ITeam AI

- Business-owned platform
- Centralized governance
- Full usage visibility
- Controlled, secure access
- Shared, cost-efficient credits
- Unlimited users per plan

LLMs Available

The ITeam AI, powered by Hatz.ai, provides access to a wide range of industry-leading Large Language Models (LLMs) for advanced enterprise use cases. New LLMs are added to the platform on an ongoing basis to provide users with access to the newest technologies.

Some of the LLMs include:

- OpenAI GPT 5.2
- Anthropic Claude 4.6
- Google PaLM 2, Gemini 3.1
- Cohere Command, Command R
- Meta Llama 2
- Mistral AI
- AI21 Labs Jurassic-2
- Stability AI StableLM
- And more as the ecosystem evolves.

The ITeam AI delivers the power of modern AI without sacrificing security, governance, or cost control. One platform. One credit pool. One secure way to scale AI across your organization.
